WHY ADELE?

Adele Goldberg. The Icon.

No. Adele – the Design Systems Repository, is not named after Adele – the singer. This

is a tribute to one of the most important computer scientists focused on graphic user interfaces, design patterns and object-oriented programming – [Adele Goldberg](#).

Adele Goldberg worked at XEROX PARC in the 70s and managed the System Concepts Laboratory where, together with Alan Kay and others, she developed Smalltalk-80 – an object-oriented, dynamically typed programming language that was meant to power the "human-computer symbiosis".

Needless to say, SmallTalk also pioneered many concepts important to all modern design systems. Objects in Smalltalk were easily transferable between applications and customizable. Smalltalk also served as the foundation of PARC's work on graphically based user interfaces (many GUI concepts have been developed by Adele Goldberg and her group!).

Thank you Adele!
