Side note, many of the new "Generative" features will only be free until 1 November 2023, at which point they will cost credits to use. Different Creative Clouds subscriptions will have different amounts of monthly credits included that can be used. These credits reset each month and unused credits do not rollover to the following month. You can find out more info here: <https://helpx.adobe.com/firefly/using/generative-credits-faq.html>

Feature 4, remove tool : Just create a new layer on top, tick "sample all layers" and it works as a non destructive method.

Great video as always! I've been having a lot of fun with the generative features too! I didn't know about leaving the box blank to remove and the remove tools... that's awesome!

@nuucha 3 months ago

I am already using these features in my professional work. Such a timesaver especially when client gives a badly framed image that needs additional background here and there

@StillOnTrack 2 months ago

Would be nice if you named your chapters something specific so we can come back to specific parts for reference

@Stoy-boy 3 months ago

Wow. And when you think this is only the start of Creative Cloud expanding into the area of AI.
