

DESIGN SYSTEMS

3 min read

Every digital business faces a crucial challenge when they begin to scale—how to ship better products, faster, while still creating consistent user experience on every screen. It's incredibly hard to do.

To solve for this, **the world's most successful digital product companies leverage the power of comprehensive design systems** to scale consistently. It's how they collect and connect interdependent UX components—including colors, symbols, fonts, shapes, and more—guided by clear design standards.

“Design systems represent an exciting paradigm shift in the landscape of design and development. Developers move faster, designers don’t have to reinvent the wheel, and ultimately, your users have a better experience.” —Katie Saylor-Miller, Staff Software Engineer, Frontend Systems, Etsy

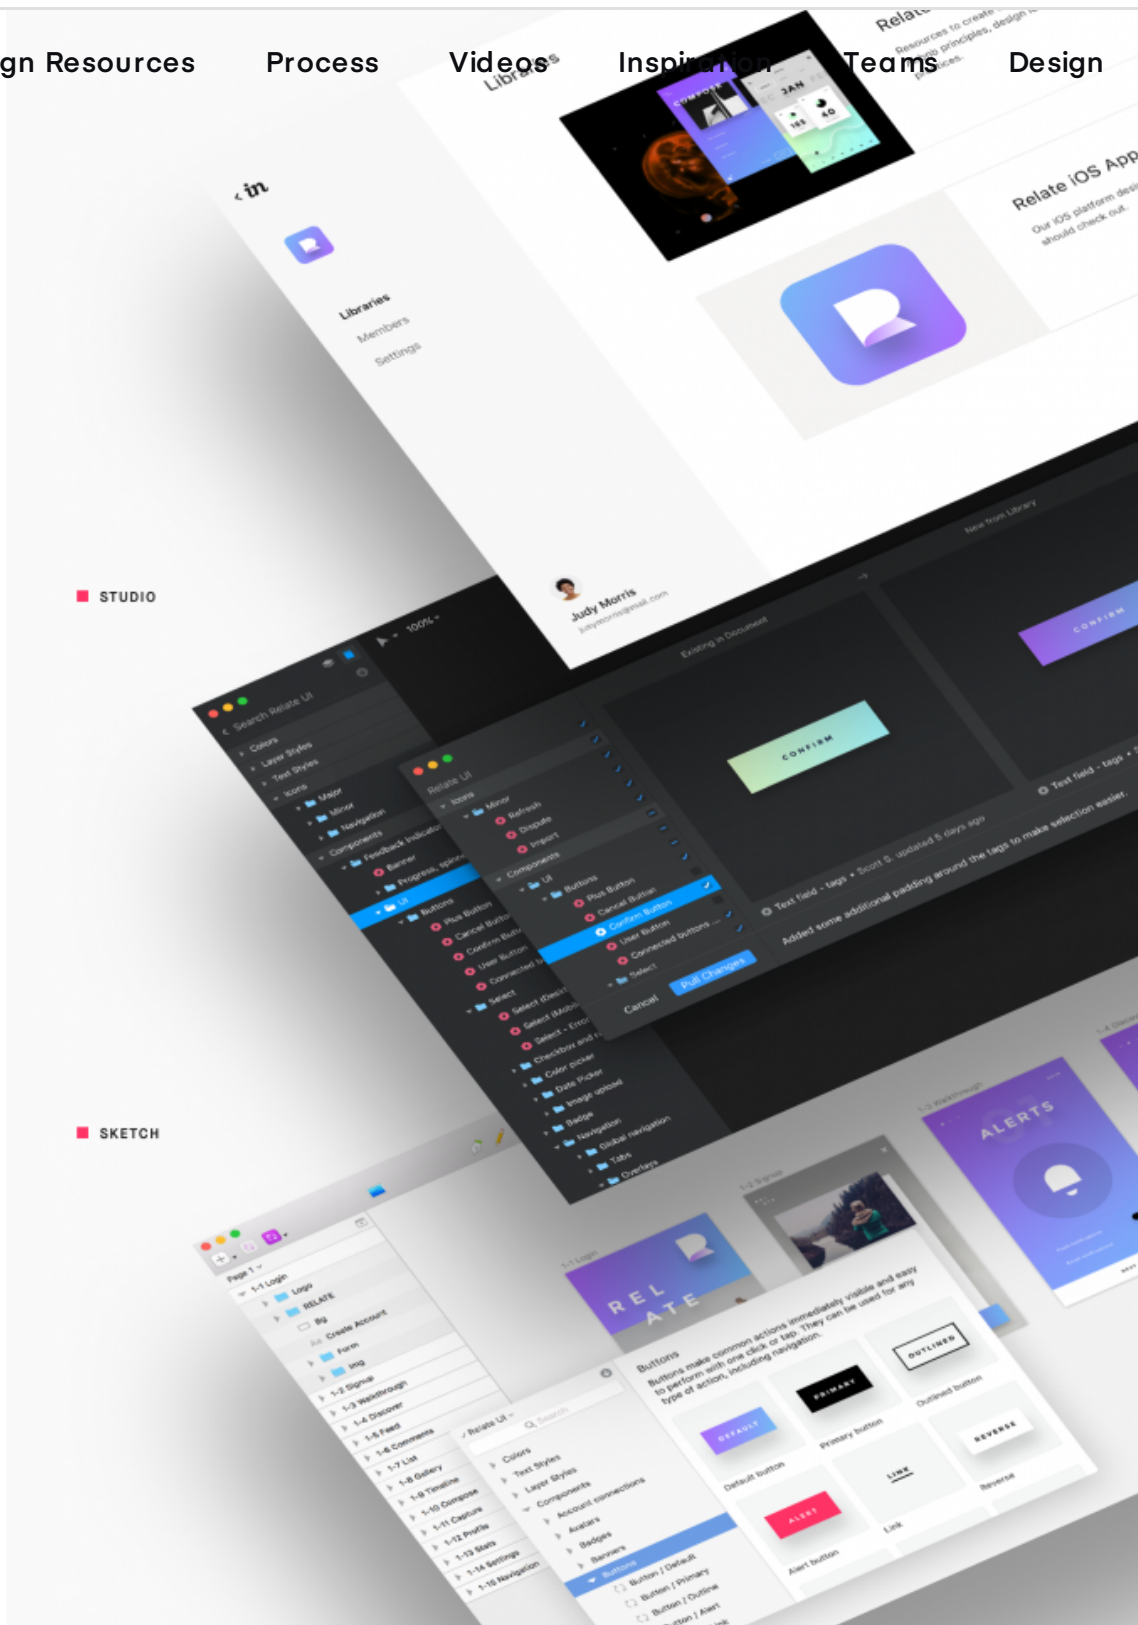

Most design systems today are homegrown, leveraging a mix of tools and platforms to manage—this makes them difficult to scale and maintain, especially at the enterprise level. There’s clearly room for innovation and growth in this space.

That’s why we are so excited to share that the team from Brand.ai is coming on board—to join forces and build the ultimate design systems technology solution.

A leading platform for managing design systems, Brand.ai is one of the most widely used tools for in-house design systems management. Thousands of teams and leading Fortune 500 companies, including Verizon and Zendesk, use Brand.ai to create, maintain, and evolve their team’s design systems.

Combining the best capabilities of the Brand.ai product with the power of the InVision platform, we’ve built **InVision Design System Manager (DSM)**.

InVision DSM makes it possible for every product team to create and maintain a **design system at scale**—allowing teams to maintain a consistent user experience across every digital interface. The company’s design language and library can now

design tools such as InVision Studio and Sketch, as well as a web view.

Here is a preview of what you can do with InVision DSM:

- ▶ **Create a single source of truth:** One place to manage all brand and UX components, so teams can stay in sync
- ▶ **Design with ease:** Access libraries directly from Sketch or InVision Studio to push and pull changes—from assets to deeply nested symbols—all with a click
- ▶ **Iterate with confidence:** Changes sync to the whole team, and designers can switch to the latest version or roll back changes at any time
- ▶ **Manage updates collaboratively:** Roles and permissions provide complete control over who can view or edit each library within the system
- ▶ **Share with external teams:** An automatically generated and customizable web portal lets any stakeholder preview and use design, documentation, and code
- ▶ **Keep code in sync:** No more manual updates or time wasted tracking down updated specs—developers can use the DSM API to integrate directly into live code
- ▶ **Protect confidential information:** Enterprise-ready features like SSO, Private Cloud, and more protect your company's most strategic assets

“InVision’s DSM isn’t just about smoothing out someone’s workflow, it’s about enabling their voice and allowing them to play a more active role in the process of designing as a team. A good design system should empower designers instead of restricting them, and this tool absolutely furthers that goal.” —Dan Ross, UX Designer, Shopify
